Know more about Plasma

WHAT IS PLASMA?

Plasma is the pale yellow liquid part of whole blood, in which the cellular elements are suspended. It is enriched in proteins that help fight infection and aid the blood in clotting. AB plasma is plasma collected from blood group AB donors. It is considered "universal donor" plasma because it is suitable for all recipients, regardless of blood group.

WHAT IS PLASMAPHERESIS?

Plasmapheresis is the standard procedure by which plasma is separated from whole blood and collected. Blood flows through a single needle placed in an arm vein, into a machine that contains a sterile, disposable plastic kit. The plasma is isolated and channeled out into a special bag, and red blood cells and other parts of the blood are returned to you through the same needle.

IS PLASMAPHERESIS SAFE?

Absolutely. The machine and the procedure have been evaluated and approved by the Food and Drug Administration (FDA), and all plastics and needles coming into contact with you are used once and discarded. At no time during the procedure is the blood being returned to you detached from the needle in your arm, so there is no risk of returning the wrong blood to you.

HOW LONG DOES PLASMAPHERESIS TAKE?

Plasmapheresis procedures take about 40 minutes, but you should allow another 20 minutes for staff to obtain your medical history. Every effort will be made to make the experience relaxing and enjoyable.

HOW DO I PREPARE TO DONATE PLASMA?

On the day of your plasma donation appointment, make sure that you get some rest and have a healthy breakfast. You should drink lots of fluids, but avoid coffee, tea, and alcohol, as these drinks actually dehydrate you. Opt for water or juice instead. You should not eat anything oily or greasy before donating plasma since this can affect the quality of your plasma.

DOES DONATING PLASMA HURT?

Donating plasma shouldn't hurt. Donating plasma should feel the same as a regular blood donation. You might feel a stinging sensation when the needle is inserted, but after that, the staff will do its best to make sure that you're comfortable throughout the donation process.

Coding and Testing:

The image shows a web browser window displaying a multi-column layout. On the left is a sidebar with a vertical list of items: 'template', 'base.html', 'login.html', 'signin.html', and 'app.py'. The main content area is divided into two columns. The left column contains a 'landing' section with a 'landing-image' and 'landing-text', followed by a 'signin' button. The right column contains a 'card' section with a 'card-title' and 'card-body'. The footer at the bottom contains a 'footer' section with a 'footer-text' and a 'footer-image'. The browser's address bar shows the URL 'http://localhost:8080/'. The browser's status bar at the bottom indicates 'Ln 100, Col 15' and 'Spaces: 2 UTF-8 CR LF'.

The image displays four sequential screenshots of a code editor, illustrating the step-by-step construction of a Bootstrap navbar. Each panel shows a different stage of the HTML code being written.

- Panel 1:** Shows the initial HTML structure, including the DOCTYPE declaration, meta tags for charset, viewport, and font awesome, and links to Bootstrap CSS and Google Font.
- Panel 2:** Shows the addition of a collapse navbar-toggle button and the start of the collapse navbar container.
- Panel 3:** Shows the completion of the collapse navbar container with a list of links.
- Panel 4:** Shows the final HTML structure, including the collapse navbar container and the optional JavaScript for the collapse functionality.
