Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Steps:

1. Donor can enter their details and check their eligibility.
2. Hospital In-Charge enter their hospital details and register themselves.
3. Recipients can enter their details and book their slots.
4. After Donor's donation finished, In-charge update the details in database.
5. After Recipient's request for plasma, In-charge has to allocate the the appropriate plasma for recipient.
6. After the process finished, all users enter their feedback to their appropriate requests
7. All the changes can enter into DB2.
